

JAN COSMIC FOUNDATION

JCF App

Feature Specification & User Flows

Document	Product feature specification — for approval
Scope	Mobile app (iOS & Android) · Desktop app (Windows/macOS/Linux)
Version	1.0
Date	1 September 2026
Status	Draft — awaiting project owner approval before development

This document describes every planned feature of the JCF App platform and the journeys of the people who will use it. It is the basis for scoping, design, and development. Nothing herein is final until approved.

Contents

1. Purpose of this document
2. Platform overview
3. User categories & access tiers
4. Mobile app features
 - Learn — wisdom & teachings
 - Practice — the InnerSpace path
 - Programs & events
 - Connect — the foundation & me
 - Give & shop
 - Me — profile & account
5. Multi-language support (worldwide)
6. Desktop app features (staff & centres)
7. User flows — mobile app
8. User flows — desktop app
9. Cross-cutting principles
10. Decisions requiring owner approval

1 • Purpose of this document

The JCF App unifies the Jan Cosmic Foundation's spiritual teachings, programs and retreats, donations, member care, and the JCF Organic shop into one platform, replacing fragmented WhatsApp, YouTube, and web-form workflows. This document specifies **every planned feature in detail**, for both the member-facing **mobile app** and the staff-facing **desktop app**, together with the user flows for each kind of user. It is submitted to the project owner for review and approval **before development begins**. Section 10 lists the specific decisions on which the owner's direction is requested.

2 • Platform overview

The platform has three surfaces sharing one backend:

Surface	Audience	What it is
Mobile app (iOS + Android)	Guests, members, students — worldwide	The foundation in your pocket: lessons, daily practice, programs, giving, shop, notifications.
Desktop app (Windows/macOS/Linux)	Staff, centre operators, the spiritual master	Offline-capable operations tool: check-in stations, centre records, shop point-of-sale, master's console.
Web dashboard + API (existing JCFAdmin)	Administrators	Authoring and management: members, programs, fees, content, causes, announcements. Serves the API for both apps.

Technical foundation (already in place): Django + PostgreSQL backend, Paystack payments (card + MTN Mobile Money), Cloudflare R2 media storage, email (SMTP) and SMS (Arkesel) notifications. The apps are Flutter, sharing one codebase, design system, and API client. Clients speak only to the API — never to the database — and secrets never leave the server.

3 • User categories & access tiers

Community (mobile app)

User	Who they are	What they can do
Guest	Anyone — no sign-in, no account	Browse general lessons, chants and daily inspiration; view public programs and events; donate; buy from the shop; find centres.
Member	An approved member of the foundation, registered by JCF staff	Everything a guest can, plus premium lessons, members-only programs, appointments with the master, guidance requests, notifications, giving history, digital membership card.
Student	A member of the school of the teaching (a person can be both member and student)	Everything a member can, plus students-only programs and the full Practice experience: level-gated guided practices, the InnerSpace journey, progress, certificates.

Sign-in is passwordless. A member or student enters the phone number or email on their JCF record and receives a one-time 6-digit code (SMS via Arkesel, or email). The code is matched to their approved record in the foundation's database; there is no self-service account creation and there are no passwords. Guests use the app freely without signing in — every locked surface shows a graceful invitation to sign in rather than a wall.

Staff (desktop app & web dashboard)

Role	Responsibilities in the apps
Administrator	Full management: members, programs, fees, content, causes, staff, reports.
Secretary	Member records, consultations diary, registrations.
Media Operations	Teachings, chants, daily inspiration, announcements; bulk media upload.
The Spiritual Master	Consultation calendar and the guidance-request queue (the master's console).
Centre Operator	Scoped to their centre: check-in station, attendance, service/children's/farm records, shop point-of-sale.

Staff sign in with staff accounts (email + password), separate from member OTP sign-in. Roles are permission-scoped; centre operators are scoped to their centre.

4 • Mobile app features

The app opens with a splash screen and a one-time 3-page welcome carousel, then a five-tab home: **Home** • **Lessons** • **Give** • **Programs** • **Profile**. Six feature pillars follow.

4.1 Learn — wisdom & teachings

Teachings library

The full library of the master's teachings — video, audio, and written — searchable and filterable by topic, format, and language. Content is tiered: **general** teachings are open to everyone including guests; **premium** teachings are reserved for signed-in members and students. Locked items are visible but marked, inviting sign-in.

Series & levels

Teachings are organised into ordered series and levels — a structured "start here" path for newcomers and a curriculum for students — rather than a flat list. Learning is **fully self-paced**: there are no classes, cohorts, or timetables. Structure comes only from the content's order and each person's own progress.

Daily Inspiration

One short teaching or quote from the master each day, shown on the Home screen and optionally delivered as a push notification. Each is shareable as a beautifully branded quote card — carrying the foundation's message outward.

In-app media player

Audio and video play inside the app with background playback (listen with the screen off), resume-where-you-left-off, and playback speed control.

Music & chants

A devotional audio section: chants and music of the foundation, playlists, and an optional **wake-up-to-chant alarm** so the day begins with the sound of the teaching.

Offline downloads

Teachings and chants can be downloaded for offline listening — essential for members in areas with poor connectivity.

Bookmarks, history & wallpapers

Save teachings for later, see recently played, continue where you stopped. Downloadable JCF wallpapers carry the foundation's imagery.

4.2 Practice — the InnerSpace path

Guided practices

The foundation's meditations and practices as guided audio sessions. A free introductory practice is open to everyone; deeper practices unlock by student level.

Daily practice tracker

Students log each day's practice with one tap or a built-in timer. The app keeps **streaks**, a calendar history, and sends a gentle reminder at the student's chosen time. Because learning is self-paced, this is the app's encouragement engine — it replaces the pacing a classroom would provide.

InnerSpace journey map

A visual map of the stages and levels of the teaching, showing where the student stands, what has been completed, and what unlocks next.

Certificates

Completing a level issues a certificate — downloadable, shareable, and verifiable via QR code.

4.3 Programs & events

Program finder

Browse all programs and events by centre, city, and date. Every program carries an audience setting — **public**, **members**, or **students** — which controls who can see and register. The annual retreat is simply one members-only program, not a special case.

Registration & payment

Each program's registration form is **authored by administrators per program/year** — fields, fees, and accommodation options are never hardcoded in the app. The member chooses the number of people, an accommodation tier (with live room availability — "3 rooms left" / "Sold out"), and completes the dynamic form while a **live cost summary** updates. Payment runs through Paystack (card + MTN MoMo). Registration is atomic and idempotent: no double-booking of rooms, no double-charging. On success the member receives an email + SMS confirmation and a **QR ID card** used at check-in.

My Registrations

All past and upcoming registrations in one place, with QR tickets and receipts.

Events calendar

Centre events and observances with reminders and add-to-calendar.

Online streaming

Live broadcasts of services, satsangs, and events, watched inside the app. An app-wide **"Live now" banner** appears when a stream is on; a schedule of upcoming streams offers reminders and add-to-calendar. Every stream carries an audience setting: **public** streams are open to guests (a powerful outreach channel), while **members/students-only** streams are properly gated behind sign-in. Recordings land automatically in a **replay library**, and the best are promoted into the teachings library as permanent content. Optional per stream: viewer count, moderated live chat, and live giving ("give during the service"). Proposed infrastructure: YouTube Live embed for public streams; a streaming service with signed playback URLs (e.g. Cloudflare Stream) for gated streams — see decision 9.

Online sessions — meetings & Q&A

Scheduled interactive sessions with the master or teachers — one feature with two modes, each session flagged **general public** or **students only**, with RSVP, reminders, and recorded attendance:

- **Q&A session** (one-to-many, any audience size): attendees submit questions from the app — in advance or live during the session — and can **upvote** others' questions so the most-wanted rise. A moderator curates the queue from the desktop console (approve, merge duplicates, reorder), and the master answers on the live stream. Attendees never have an open microphone, so the format is safe at any scale. The recording joins the replay library, chaptered by question.
- **Online meeting** (many-to-many, small groups): real video meetings for student sessions and group work — join from the app through an integrated meeting platform (Jitsi / Google Meet / Zoom — see decision 10), with the app owning the schedule, RSVPs, and attendance.

Online programs

Paid multi-session online courses delivered through the same series and payment infrastructure — the foundation's teaching offered to the world.

4.4 Connect — the foundation & me

Consultations with the master

Members book appointments with the spiritual master — remote or onsite — choose a date, add a reason, and track status. Reminders arrive before the session.

Guidance requests

Members submit a prayer or guidance request from the app; the master's guidance returns in-app, privately.

Announcements & notifications

Foundation announcements targeted by audience (public / members / students), pinned when important, plus a personal notification inbox and push notifications.

Centre finder

Every JCF centre on a map with contact details, service times, and directions.

Volunteering

See service opportunities, sign up for tasks, and log service hours.

Testimonies

Read member testimonies; submit your own (published after staff moderation).

4.5 Give & shop

Donations

Give to the foundation's causes. Goal-based causes show live progress ("GHS X raised of Y"); general causes show their impact. Guests can give; members get prefilled details and receipts by email.

Recurring giving

Monthly partner pledges through Paystack subscriptions — set up, change, or cancel in the app.

My Giving

Personal giving history with yearly totals and receipts.

JCF Organic shop

The foundation's organic products sold in-app: a catalogue by category with photos, prices, and stock; a cart that survives app restarts; checkout with **delivery or centre pickup**; Paystack payment; and **My Orders** with status tracking (pending → paid → fulfilled → delivered). Guests can buy; members check out faster with saved details. Stock is shared with in-person sales at centres (see desktop point-of-sale).

4.6 Me — profile & account

Profile & self-service

Name, photo, centre, and status (Member / Student). Members can update their own contact details, with changes applied after staff approval.

Digital membership card

A QR member ID for check-ins and verification at centres and events.

My activity & settings

Registrations, orders, giving, and downloads in one place. Settings for language, notification preferences, and practice reminder times.

5 • Multi-language support (worldwide)

The app is built for a worldwide audience from day one. Two independent layers:

- **UI language** — every label and message localised. Rolled out in waves:
 - Wave 1** English (default), French, Spanish, German, Portuguese
 - Wave 2** Italian, Russian, Dutch, Arabic, Hindi, Chinese (Simplified)
 - Home** Twi (Akan), Ewe, Ga, Dagbani, Hausa
- **Content language** — teachings, chants, daily inspiration, and announcements each carry a language; members choose preferred content languages, and a teaching available in several languages offers a switcher.
- Language is chosen at first launch (defaulting to the device's language) and changeable any time.
- Translations are authored by administrators — adding a language never requires an app update.
- Untranslated content falls back to English gracefully; right-to-left layout (Arabic) is supported from the start.
- Server-generated text (receipts, SMS/email, form labels, error messages) follows the member's language too.

6 • Desktop app features (staff & centres)

The desktop app is the foundation's **operations tool** — built for what a web browser does poorly: working offline at centres, using hardware (camera / scanner / receipt printer), and running as a kiosk station. Staff sign in with staff accounts and see only what their role allows. Program/fee/content *authoring* remains in the existing web dashboard.

6.1 Check-in station

At retreats and programs: scan registration **QR tickets** with a webcam, mark arrivals, and watch live headcounts and room allocations. Works fully offline with a local queue that syncs when connectivity returns. Also scans **membership cards** for service attendance.

6.2 Centre operations (offline-first)

Day-to-day records captured at the centre even without internet, synced later: **attendance** at services and events; **service logs** (tasks and volunteer hours); **children's records**; and **farm logs** for JCF Organic production.

6.3 Shop point-of-sale

Sell JCF Organic products in person at centres and events. Sales decrement the **same stock** the mobile shop sells from; supports cash and Paystack-terminal payment, receipt printing, and daily sales summaries. Inventory management: stock receipts, adjustments, and low-stock alerts.

6.4 Master's console

The spiritual master's own view: today's consultation calendar and the guidance-request queue — read each request, respond, and mark it answered.

6.5 Content studio

For media operations: bulk-upload teachings and chants (with upload progress), organise series, and schedule announcements and Daily Inspiration entries ahead of time.

6.6 Live session console

Run online streams and sessions: start/end the broadcast, monitor viewers, and manage the **Q&A question queue** — approve, merge duplicates, reorder, and mark questions answered as the master responds on stream. Schedule sessions with their audience (general public or students only), see RSVPs, record attendance for online meetings, and moderate live chat when enabled.

6.7 Reports

Dashboards that work offline and export to CSV/PDF: attendance trends, registrations, giving, shop sales, and practice adoption per centre.

7 • User flows — mobile app

Flow M1 — First open (guest)

Actor: anyone · Requires: nothing

1. Open the app → splash screen → 3-page welcome carousel (skippable, shown once).
2. Choose language (defaults to the phone's language).
3. Land on Home: Daily Inspiration, latest announcements, featured programs.
4. Browse general lessons, chants, public programs, causes, shop, centres — all without an account.
5. Any premium/members-only item shows a lock and a friendly "Sign in as a member" invitation.

Flow M2 — Member/student sign-in (OTP)

Actor: approved member or student · Requires: their phone/email on JCF's records

1. Tap "Sign in" → enter the phone number or email on their membership record.
2. Receive a 6-digit one-time code by SMS (Arkesel) or email.
3. Enter the code → the app verifies it against their approved record.
4. Signed in: premium lessons, member programs, appointments, notifications, and profile unlock.
No password ever exists.

If the phone/email isn't on record → clear message inviting them to contact their centre; nothing is created self-service.

Flow M3 — Learning a lesson (self-paced)

Actor: guest (general) or member/student (premium)

1. Open Lessons → browse or search; pick a series or a single teaching.
2. Open a lesson → read/watch/listen in the in-app player (background audio, resume supported).
3. Progress is saved automatically; the lesson is marked complete when finished.
4. Home shows a "Continue learning" card pointing at the next lesson in the series.
5. Optionally download the lesson for offline; bookmark it for later.

Students: finishing all lessons of a level updates the InnerSpace journey map and issues the level certificate (QR-verifiable).

Flow M4 — Daily practice (student)

Actor: student · Requires: sign-in

1. A gentle reminder arrives at the student's chosen time.
2. Open Practice → start the guided practice for their level (or the timer).
3. On completion the day is logged; the streak and calendar update.
4. The journey map reflects overall progress on the path.

Flow M5 — Registering for a program (e.g. the retreat)

Actor: member/student (or guest, for public programs) · Payment: Paystack

1. Open Programs → find the program (by centre/date) → view dates, venue, fees, accommodation tiers with live availability.
2. Tap Register (members-only programs ask guests to sign in first).
3. Choose number of people and an accommodation tier; fill the program's registration form (fields authored by admins for that year); watch the live cost summary.
4. Continue to payment → Paystack page (card or MTN MoMo) → pay.
5. The app confirms the payment; rooms are allocated safely (no double-booking, no double-charge).
6. Receive email + SMS confirmation and a QR ID card in the app (My Registrations) — shown at the check-in station on arrival.

Free programs skip steps 4–5 and confirm instantly. If a tier sells out mid-registration, the member is told immediately and chooses another.

Flow M6 — Giving (one-off and monthly)

Actor: anyone (guests included)

1. Open Give → choose a cause (see goal progress or impact statement).
2. Enter amount (+ email for the receipt; prefilled for members).
3. Pay via Paystack → the app verifies → thank-you + receipt.
4. Optionally make it monthly (recurring pledge); manage or cancel any time in My Giving.

Flow M7 — Buying from the JCF Organic shop

Actor: anyone (guests included)

1. Open the shop → browse products by category → product page (photos, price, stock).
2. Add to cart (the cart is kept even if the app closes).
3. Checkout: choose delivery or centre pickup; enter/confirm contact and address (prefilled for members).
4. Pay via Paystack → order confirmed with a reference.
5. Track the order in My Orders: pending → paid → fulfilled → delivered/collected.

Flow M8 — Booking a consultation with the master

Actor: member · Requires: sign-in

1. Home → My appointments → Book.
2. Choose Remote or Onsite, pick a date, add an optional reason.
3. The request appears in the master's console; the member sees its status.
4. A reminder arrives before the appointment.

Related: a guidance request follows the same shape without a date — submitted privately, answered in-app by the master.

Flow M9 — Watching a live stream

Actor: guest (public streams) or member/student (gated streams)

1. A reminder arrives ("Sunday service starts in 15 minutes") — or the user simply opens the app and sees the "Live now" banner.
2. Tap the banner → the stream plays in the in-app player (members-only streams ask guests to sign in).
3. Optionally chat alongside the stream (where enabled) or tap "Give" for live giving during the service.
4. Missed it? The replay appears in the replay library shortly after the broadcast ends.

Flow M10 — Attending an online Q&A session

Actor: general public or students, per session · Rides on the streaming feature

1. The session is announced in-app → RSVP → reminders before it starts.
2. Before or during the session, submit a question from the app; upvote other questions you want answered.
3. Join the live stream at start time; the moderator feeds curated questions to the master, who answers on stream.
4. Your question's status updates (queued → answered); the recording lands in the replay library, chaptered by question.

Online meetings (small groups, e.g. students): same announce → RSVP → remind rhythm, but the "Join" button opens a real video meeting; attendance is recorded automatically.

8 • User flows — desktop app

Flow D1 — Staff sign-in

Actor: any staff role

1. Open the desktop app → sign in with staff email + password.
2. The app shows only the modules the role allows (a centre operator sees their centre's tools; the master sees the console).
3. If offline, previously synced data opens read/write; changes queue for sync.

Flow D2 — Retreat check-in station

Actor: centre operator · Hardware: webcam

1. Open Check-in → select the program (e.g. Retreat 2027).
2. Attendee presents the QR ID card from their phone (or printout) → scan.
3. The screen shows their registration: names, people count, tier, room allocation, payment status → tap Confirm arrival.
4. Live headcount updates; duplicates and invalid codes are flagged instantly.

Offline: scans are validated against the pre-synced registration list and queued; everything syncs when the connection returns.

Flow D3 — Recording centre operations (offline-first)

Actor: centre operator

1. Open the relevant module: Attendance, Service logs, Children's records, or Farm logs.
2. Record the entries for the day — no internet needed.
3. When the machine is next online, queued records sync to the foundation's database automatically; conflicts are surfaced for review.

Flow D4 — Shop point-of-sale

Actor: centre operator / shop staff

1. Open POS → scan or pick products → quantities → total.
2. Take payment: cash (recorded) or Paystack terminal.
3. Stock decrements from the same inventory the mobile shop uses; a receipt prints.
4. End of day: sales summary for the centre.

Flow D5 — The master's day

Actor: the spiritual master

1. Open the console → today's consultation calendar.
2. Work through the guidance-request queue: read each request, write the guidance, mark answered — the member receives it in their app.
3. Consultation outcomes and remarks are recorded against the member's record.

Flow D6 — Running a live session (moderator)

Actor: media operations / moderator + the master

1. Schedule the session in the live session console: type (stream / Q&A / meeting), audience (public or students), date and time — it announces itself in the app.
2. At start time: go live; the "Live now" banner appears for the target audience; watch viewer numbers.
3. For Q&A: work the question queue — approve incoming questions, merge duplicates, reorder by upvotes, and feed the next question to the master; mark each answered.
4. End the broadcast → the recording is saved to the replay library; attendance/viewing is recorded.

Flow D7 — Publishing content (media operations)

Actor: media operations

1. Open Content studio → bulk-upload the week's teachings/chants with progress bars.
2. Assign topic, series, level, language(s), and tier (general/premium).
3. Schedule Daily Inspiration entries and announcements for the days ahead.
4. Published content appears in the mobile app immediately at the scheduled time.

9 • Cross-cutting principles

- **Dynamic by design** — all fees, dates, tiers, forms, and translations are authored by administrators; nothing is hardcoded in the apps, so yearly changes never require an app update.
- **Offline-tolerant** — cached content and downloads on mobile; queued, syncable records on desktop.
- **Payment safety** — card details never touch the apps (Paystack hosted payment + server verification); every payment is idempotent with unique references (JCF-{YEAR}-#####, JCF-SHOP-#####); registrations allocate rooms atomically. Reuses JCF's existing Paystack account.
- **Privacy & security** — secrets live only on the server; members see only their own data; guidance requests are private between the member and the master.
- **Guest experience as a funnel** — everything gated degrades gracefully into an invitation, never a dead end.

- **One backend** — apps → foundation API → database, always; one source of truth for members, stock, registrations, and content.

10 • Decisions requiring owner approval

#	Decision	Options & recommendation
1	Roadmap priority — which pillar leads development?	Recommended: Practice/InnerSpace + Lessons first (daily-retention core), then Programs, then Shop.
2	Premium content model	Included with membership (recommended to start) vs a paid subscription for exclusive content.
3	Levels & prerequisites	Level N must be completed to unlock level N+1 (recommended), or all lessons open to every student from day one.
4	Shop delivery scope	Centre pickup only, courier delivery within Ghana, or both (drives delivery fees/zones and the checkout design).
5	Shop payment account	Same Paystack account as donations, or a separate account for shop accounting.
6	Desktop scope	Operations tool only, as specified (recommended) — or additionally a full management surface duplicating the web dashboard.
7	Translation sourcing	Volunteer translators per language community, professional service, or AI-assisted with human review.
8	Content across languages	Translate/subtitle the master's teachings vs natively produced per-language content (affects how content is modelled).
9	Streaming infrastructure	Recommended: hybrid — YouTube Live embed for public streams (free, maximum reach); a streaming service with signed playback URLs (e.g. Cloudflare Stream) for members/students-only streams (true gating, no ads). Alternative: one or the other for everything.
10	Online meeting platform	Integrate Jitsi (free, joins in-app), Google Meet (simplest), or Zoom (familiar, licensed) — the app owns scheduling/RSVP/attendance either way. Building custom video calling is not recommended.
11	Live chat on streams	Enable moderated live chat alongside streams (needs a moderator per broadcast) or launch without chat and add later.
12	Live giving during broadcasts	Show a "Give" button on live streams (recommended — proven pattern) or keep giving separate from streaming.
